Map

Inset

Out Area

Where international, state, and/or county boundaries coincide, the map shows the boundary symbol for only the highest-ranking of these boundaries.

1 A - - - following a place name indicates that the place is coterminous with a MCD. A - - - indicates that the place is also a false MCD; the false MCD name is not shown.

2 This map shows tribal census tract boundaries and numbers within the subject entity; nontribal census tract boundaries are shown outside of the subject entity but without numbers. A tribal census tract is a type of census tract defined within a federally recognized American Indian reservation or off-reservation trust land for the purpose of providing data based on an American Indian hierarchy rather than by state and county. Where reservations or off-reservation trust lands cross state or county boundaries, the same tribal census tract number may be assigned on both sides of the boundary, and, if so, constitutes a single tribal census tract entity.

3 A - - - following a block number indicates that the block number is repeated elsewhere in the block.

Inset		Out Area

Where international, state, and/or county boundaries coincide, the map shows the boundary symbol for only the highest-ranking of these boundaries.

¹ A “-” following a place name indicates that the place is coextensive with a MCD. A “-” indicates that the place is also a false MCD, the false MCD name is not shown.

² This map shows tribal census tract boundaries and numbers within the subject entity; coextensive census tract boundaries are not shown outside of the subject entity but without numbers. A tribal census tract is a type of census tract defined within a federal tribe’s recognized state and county boundaries or off-reservation trust land for the purpose of providing data based on an American Indian sovereignty that is not recognized by the state and county or off-reservation trust lands cross state or county boundaries, the same tribal census tract may be assigned on both sides of the boundary, and, if so, constitutes a single tribal census tract entity.

³ A “-” following a block number indicates that the block number is repeated elsewhere in the block.

Figure 1: A diagram illustrating the components of a spatial data model. It shows a grid of cells with various labels and symbols. The top row has 'Highway' and 'Pipe/Power Line'. The second row has 'Secondary Road' and 'Ridge/Physical Feature'. The third row has 'Junction/Barrier/Edge' and 'Property/Edge Line'. The bottom row has 'Railroad' and 'Nonvisible Boundary'. On the right side, there are labels for 'Stream/Shortlines', 'Intermittent Stream', 'River', 'Lake', and 'Glacier'. In the center, there is a box labeled 'Inset' and another labeled 'Out Area'. A legend at the bottom left shows a blue square with a white 'X' and the text 'MCD60X'.

Where international, state, and/or county boundaries coincide, the map shows the boundary symbol for only the highest-ranking of these boundaries.

3. A "—" indicates a place name indicates that the place is coterminous with a MCD. A "X" indicates that the place is also a false MCD; the false MCD name is also shown.

2. This map shows tribal census tract boundaries and numbers within the subject county. Tribal census tract boundaries are shown outside of the subject county but without numbers. A tribal census tract is a type of census tract defined within a federally recognized American Indian reservation or off-reservation trust land for the purpose of providing data based on an American Indian ethnicity other than the general population of the reservation or off-reservation trust lands cross state or county boundaries, the same tribal census tract number may be used for the same reservation or trust lands, and, if so, constitutes a single tribal census tract unit.

4. A "0" indicates that the block number indicates that the block number is repeated elsewhere in the block.

Where international, state, and/or county boundaries coincide, the map shows the boundary symbol for only the highest-ranking of these boundaries.

2. Following a place name indicates that the place is a census tract with a MCD. A "C" indicates that the place is also a false MCD; the false MCD name is given in parentheses.

3. This map shows tribal census tract boundaries and numbers within the subject entity; nontribal census tract boundaries are shown outside of the subject entity but without numbers. The numbers are the census tract numbers of census tracts defined within a federally recognized American Indian reservation or reservation trust land. The numbers are the census tract numbers of nontribal American Indian territory rather than by state and county. Where reservations and reservation trust land are adjacent to nontribal territory, the nontribal census tract number may be assigned on both sides of the boundary, and, if so, constitutes a single tribal census tract entity.

4. Following a block number indicates that the block number is repeated elsewhere in the block.
